

The 'Appui au développement intégré de la santé orale au Laos et à Madagascar par une approche transversale' project.

Action plan with Dental Faculty, under the University of Health Sciences of Lao PDR for pre service training on Infection prevention and Control (IPC) – 2019-2022–

Background and Rationale

AOI is implementing the 'Appui au développement intégré de la santé orale au Laos et à Madagascar par une approche transversale' project together with the Ministry of health in Laos with the main objective to improve health status of the population. AOI uses a transversal approach by targeting two (2) specific objectives: 1) to improve the access to quality health care and 2) to strengthen competences of health care professionals (including pre-service and in-service health care staff), administrators and professional associations.

AOI supported the renovation of the dental faculty in Vientiane, the development of adapted training tools and the integration of a module on Infection prevention and control in the previous project named ' le Projet de la Promotion de la santé bucco-dentaire en RDP Lao phase III'. The dental faculty of Vientiane as well as the other faculties are engaged in the reform of their teaching systems by gradually evolving the training curricula. Support will be provided for the planning of training programs and the development of pedagogical tools that are linked to existing national guidelines developed by the Ministry of Health in Lao PDR.

Goals and objectives

1. To include the teaching module of IPC for 2 credits to curriculum for dental Faculty
2. To develop teaching materials for IPC teaching
3. To train the teachers trainers for IPC teaching
4. To support dental Faculty and LDA to train dental practitioners from 4 dental clinics

Activity 1: Inclusion of the teaching module of IPC for 2 credits for dental Faculty

- AOI will support the revision of IPC teaching material through the organization of workshops

Expected outcome: IPC is reinforced in the pre-service curriculum.

Activity 2: Development of the teaching materials of IPC for dental Faculty

- Together with experts, the dental Faculty and AOI will produce teaching materials such as hand out and power point presentation.

Expected outcome: Pedagogical materials are available and used for students

Activity 3: Training for improved practices for focal points for IPC in the dental Faculty

- IPC experts will train the focal points (lecturer) in the dental Faculty to become the mentor for IPC. (at least 5-6 trainers)

Expected outcome: Referring teachers in IPC in the dental Faculty are trained

Activity 4: Training for improved practices for Dental practitioners of 3 district hospitals and 1 central hospital

- Together focal points of the Dental Faculty and LDA members will train dentists of 3 district hospitals of Vientiane Capital City (Hardxayfong District hospital, Naxaythong District hospital,

Xaythani District hospital) and at Setthartirath hospital and provide advisory on environment and ergonomics for better IPC practices in their workplace.

Expected outcome: IPC is improved in 4 dental clinics in Vientiane capital city.

Activity 5: Regular monitoring, technical advisory and evaluation led by dental Faculty and AOI staff

- Together the project focal points of the dental Faculty and AOI staff will do regular observation of activities taking place and supervise the progress of project activities.

Expected outcome:

The information gathered will be used in making decisions for improving the planning and implementation of project activities.
